

Car Riding Safety Guidelines

Safety of the driver and the pup are our primary priorities. The safest spots for pups to ride are in a crate, behind a barrier in an SUV or station wagon, on the back seat wearing a dog seat belt harness, or on the floor. **Due to the proliferation of front and side airbags, pups riding on the floor of the front passenger seat must remain in a down at all times.** Pups should never ride on the front passenger seat, ride in the open back of a pickup, or be restrained by tethers attached to their collars.

We greatly appreciate your dedication to our pups' training and safety. For guidance in teaching your pup to ride calmly in the car and for questions about your particular situation, please contact your RC or your RM.
